

Ariel Mejia Jr., P.E

I graduated from the **University of Houston** with a **bachelor's degree in civil engineering** and have lived in the district for about two years.

I have several years of expertise in the greater Houston region, mainly in residential property development, municipal utility districts (MUDs), and levee improvement districts (LIDs). I also have experience with the analysis and design of roadways, water mains, sanitary sewers, storm sewers, grading and earthwork, detention ponds, and lift stations, as well as the preparation of numerous engineering analyses and reports, cost estimates, contract documents, construction drawings, and construction phase services.

Over the last two years, I have managed over \$15 million in construction assets. Additionally, I have participated in a variety of programs throughout the years and was recently named **Young Engineer of the Year**. However, I consider my greatest accomplishment is my family, particularly my small two-month-old infant son.

I will be honored to serve my district as a committed Director in Position #2 on the Cypress Forest PUD.
